JUSTIN LANNING

Game QA Tester
Houston, TX 77090
(832) 477-5274 | Jll40@live.com
www.linkedin.com/in/justin-lanning-899986189

PROFESSIONAL SUMMARY

Game QA Tester with a strong foundation in troubleshooting, debugging, and system analysis. Over five years of technical experience diagnosing and repairing complex mechanical and electrical systems, now transitioning into the gaming and tech industry. Skilled in **C#**, **C++**, **Unreal Engine 5** and **Unity**, with a passion for testing, quality assurance, and creating reliable user experiences. Experienced in remote collaboration and Agile environments.

TECHNICAL SKILLS

Programming Languages: C#, C++, Python
Game Engines: Unity, Unreal Engine 5
Tools & Platforms: Visual Studio, Git/GitHub, Version Control, Jira, Agile methodologies, Remote collaboration tools
QA & Testing: Manual testing, Debugging, Bug tracking, Documentation, White Box Testing, Black Box Testing, Gray Box Testing
Soft Skills: Team leadership, Technical communication, Training & mentorship, Problem-solving

---

Projects

Potion Panic – Networking Engineer

- Integrated Steamworks SDK for matchmaking, lobby management, and peer-to-peer networking, enabling seamless session creation
- Designed and implemented low-latency multiplayer networking systems in Unreal Engine 5 using replication, RPCs, and client-server architecture

Highway Heat – Gameplay Engineer

- Built gameplay systems on top of an ECS architecture using EnTT, structuring AI components and systems for scalability and improving update performance across large numbers of entities.

- Integrated Gateware for cross-platform windowing, input handling, and system abstraction, streamlining engine-level interactions and reducing platform-specific code complexity.

Operation Starfall – Systems Engineer

- Designed and implemented a modular inventory system supporting item stacking, equipment management, and UI integration, reducing item management errors and improving player interaction efficiency.
- Built a robust save/load system using serialization (JSON/Binary) and persistent data handling, ensuring reliable game state recovery across sessions and reducing data loss issues.

PROFESSIONAL EXPERIENCE

Contracted Remote QA – QA Tester

Elder Scrolls Online – March 2013 – April 2014

- Analyzed system behavior and logic paths to identify edge cases, including invalid inputs, state inconsistencies, and unexpected player interactions.
- Reproduced and isolated defects by investigating in-game behavior against expected logic, providing detailed reports with clear reproduction steps and impact assessment.

Marvel Rivals – October 2024 – December 2024

- **Validated gameplay systems across multiple scenarios and boundary conditions to ensure stability, consistency, and adherence to design specifications.**
- **Maintained detailed test documentation, including test cases, test results, and defect tracking, improving visibility into quality and coverage.**

Serta Simmons Bedding – *Maintenance Technician*
Houston, TX | February 2023 – February 2024

- Diagnosed and repaired complex machinery, electrical, pneumatic, and hydraulic systems—using systematic troubleshooting similar to debugging in QA environments.
- Performed preventive maintenance and prioritize tasks to optimize production uptime.
- Trained operators in technical skills, improving troubleshooting and equipment efficiency.

U.S. Army – *Helicopter Maintenance Supervisor / Repairer*
Various Locations | July 2016 – December 2019

- Supervised teams performing diagnostics and maintenance on helicopter systems, ensuring 100% operational readiness.
- Conducted structured tests on electrical, hydraulic, and fuel systems—transferable to software QA methodologies.
- Created documentation and training materials to standardize processes across teams.

EDUCATION

Full Sail University – *B.S. in Video Game Development, GPA: 3.50*
June 2026 – Winter Park, FL

Universal Technical Institute (UTI) – *A.O.S. in Automotive Technology, GPA: 3.70*
July 2022 – Houston, TX
